Piano Wizard:

A PC based video game that teaches anyone how to play the piano by using a color-coded piano keyboard that is bundled with software, allowing the user to simply hit the correct note at the correct time to make music. The software is compatible with electronic music files, allowing users to import their favorite song and play along with a completely new music game.

Ultrasones's iCans:

Ultrasones's first portable headphones geared towards iPods/MP3 players. Ultrasones's S-Logic technology delivers an incredible surround sound experience in a stereo headphone, but more importantly reduces sound pressure on the ear drum by 40%. Preserving hearing is crucial to iPod/MP3 users as conventional headphones (earbuds) do a great deal of damage to the user's ears.

Max-IP-Cam™ Network Camera:

A color camera that enables consumers to monitor and record via their home or office network from anywhere in the world. The camera features a built-in motion detection component which notifies the consumer via email if a breach in security has been detected. In addition, the camera boasts an integrated microphone and infrared LEDs that allows the camera to record even in the dark. Through its network connection, the Max-IP-Cam™ continues to capture surveillance even without a computer running. Surveillance is recorded onto a PC, independently of a network via an SD Card. The camera can also be connected to a TV or VCR for viewing and recording and Swann's user-friendly plug n' play software makes set up extremely easy. <http://www.swann.com.au>

Laser Turntable:

The ELP Corporation manufactures and sells the world's only Laser Turntable(LT). The LT employs patented technology that uses a set of 5 laser beams to read the analog audio information of vinyl records. Because there is no physical contact with the record, this device allows vinyl enthusiasts to keep their precious collections in pristine condition and enjoy the warm, analog sound the way the music was meant to be heard. It's also a perfect piece of audio equipment for libraries, recording studios, universities, museums, and any other institutions that maintain a large collection of records.
